COMMONWEALTH OF PENNSYLVANIA  
DEPARTMENT OF AGRICULTURE  
HARRISBURG

May 12, 1960

Dr. William L. Henning, Secretary  
Pennsylvania Department of Agriculture

Dear Sir:

In compliance with provisions of various laws related to certain agricultural materials, there are submitted herewith the results of analyses of official samples of commercial feed, fertilizer, and liming materials taken during 1959.

The samples herein reported represent various lots of products offered for sale by the dealers of the Commonwealth. They were taken by official methods by agents of the Pennsylvania Department of Agriculture and were analyzed by methods of the Association of Official Agricultural Chemists.

The report also includes production, registration, and other information believed to be of value to those interested in the agricultural aspects of our Commonwealth.

Respectfully submitted,

A handwritten signature in cursive script that reads "Delmar K. Myers".

Delmar K. Myers, Acting Director  
Bureau of Foods and Chemistry

# COMMERCIAL FEED, FERTILIZER, AND LIMING MATERIALS

Reports for the Year 1959

## INTRODUCTION

The Pennsylvania Department of Agriculture is required by law to make regular inspections of commercial feed, fertilizer, and liming materials offered for sale within the Commonwealth. Results of inspections for the calendar year 1959 are summarized in this publication.

This report is not to be interpreted as an evaluation of feed formulas or feeding practices. Similarly, the reports on fertilizer and lime are only an indication as to the agreement existing between the guarantee as stated and the actual amount of the guaranteed component found to be present.

Inquiries as to the suitability of the various agricultural products for a specific purpose, should be directed to the College of Agriculture of Pennsylvania State University or your local County Agricultural Agent.

Pennsylvania has taken a considerable stride forward with the enactment of the Pennsylvania Commercial Feed Law and the Pennsylvania Fertilizer Law of 1956. Both measures follow closely the Uniform Model Bills which were prepared by national committees consisting of experienced control officials and representatives of related industries. Slight modifications of the uniform proposals better fit the laws to the needs of Pennsylvania agriculture, but the similarity with the laws of neighboring states is sufficient to avoid serious problems for the manufacturer engaged in interstate commerce.

During 1959 nearly 4,000 samples of commercial feed were secured by agents of the Bureau of Foods and Chemistry. This represents approximately a 25% increase over the number of samples analyzed during the previous year. The program will continue at about this level as it represents the approximate capacity of our present laboratory facilities. In addition to the routine analysis for the determination of protein, fat, and fiber, the analytical work included a check on the level of drugs present in medicated feeds. Additional drug assays as well as hormone, antibiotic, and vitamin work are constantly being added to this phase of our expanding program.

During 1959 more than 1,200 fertilizer samples were analyzed. This represents an increase over the number of samples taken in 1958. A further expansion of this control program is planned.

The new laws are an assurance of a better enforcement program and of greater service to the manufacturer and the farmer. Two important factors are the initiation of sampling on a year-around basis together with the fact that the inspectors have successfully qualified by passing an examination of the State Civil Service Commission.

The control program has two basic purposes:

- (1) To assure the farmer of a quality product.
- (2) To make certain that manufacturers compete fairly with each other.

Only the fact that the vast majority of manufacturers conduct their businesses at a highly ethical level insures the program of any degree of success.

Advances in animal nutrition have been remarkable in the past few years. The one-time philosophy based solely on protein, fat, and fiber has been replaced by a feeding program that includes the use of vitamins, minerals, antibiotics, hormones, and other medicaments. These newcomers to the field of animal nutrition require surveillance as they are often present in minute amounts, which of necessity must be uniformly dispersed through the feed. These changes represent in the eyes of most feeders a considerable improvement in feeding practice and generally result in better feed for the more efficient production of meat, milk, eggs, and fiber.

Advances in agronomy have also been considerable. Trace amounts of molybdenum for example, in a field of clover, or trace amounts of boron in a truck patch of cauliflower can be the difference between failure and a bumper crop.

The use of fertilizer not only has increased in actual tonnage from a decade ago, but the total plant nutrient content per ton is greater. Today 8-16-16 and 15-30-15 are not unusual grades, while 5-10-5 just meets the minimum requirement of the new Pennsylvania Fertilizer Law.

Harrisburg, Pa.  
May 5, 1960

- NOTE -

The following page consists of the new tonnage report form. This form will be first used to report 1960 tonnage. All previous versions of this form are obsolete and should be destroyed.

## COMMERCIAL FEED TONNAGE AND FEED CONTROL FEE REMITTANCE

FOR THE YEAR ENDING DECEMBER 31, 19\_\_\_\_

Note--Regulation 504. The Feed Control Fee shall be paid only on mixtures of ingredients. Individual ingredients such as wheatbran, oil meals, etc., are not subject to the Feed Control Fee, but must be registered, and an annual statement of the tonnage sold in Pennsylvania reported on forms provided by the Secretary of Agriculture. The Feed Control Fee shall be paid on all mixtures of ingredients, including premixes, supplements, and concentrates offered for sale.

Make remittance payable to the:

COMMONWEALTH OF PENNSYLVANIA

The undersigned hereby states that he believes to be complete and correct this report of tonnage on all commercial feeds sold in Pennsylvania and subject to the Pennsylvania Commercial Feed Law of 1956 for the period indicated above.

# FEED INGREDIENT ANALYSES

This chart does not give actual or average figures for feed ingredients, but values that are "safe" for use in calculating the guaranteed analysis of mixed feeds. The protein and fat percentages are a little less than the actual average value and the fiber percentages given are just a little more than the actual average value.

The Pennsylvania Commercial Feed Law requires each sale of feedstuffs to be registered and to be guaranteed as to its composition. The guaranteed analysis should be on each bag or on the invoice in the case of bulk delivery. The manufacturer's guarantees should more closely give the true values for that particular shipment.

INGREDIENT	CRUDE PROTEIN %	CRUDE FAT %	CRUDE FIBER %
Alfalfa Meal	17.0	2.0	25.0
Barley	11.5	2.0	6.0

The Pennsylvania Department of Agriculture actively participates in the proceedings of the Association of American Feed Control Officials, Inc. For your information there are reproduced below changes in definitions which we will begin to use as of January 1, 1961.

WHEAT MILL RUN consists of coarse wheat bran, fine particles of wheat bran, wheat shorts, wheat germ, wheat flour, and the offal from the "tail of the mill." This product shall be obtained in the usual process of commercial milling and shall contain not more than 9.5 percent of crude fiber.

WHEAT MIDDLINGS consists of fine particles of wheat bran, wheat shorts, wheat germ, wheat flour, and some of the offal from the "tail of the mill." This product shall be obtained in the usual process of commercial milling and shall contain not more than 9.5 percent of crude fiber.

WHEAT SHORTS consists of fine particles of wheat bran, wheat germ, wheat flour, and the offal from the "tail of the mill." This product shall be obtained in the usual process of commercial milling and shall contain not more than 7.0 percent of crude fiber.

WHEAT RED DOG consists of the offal from the "tail of the mill" together with some fine particles of wheat bran, wheat germ, and wheat flour. This product shall be obtained in the usual process of commercial milling and shall contain not more than 4.0 percent of crude fiber.
